

Introduction

This is an introduction to CPSC 121 SI. The SI program is meant to provide students with a peer to peer environment to learn. SI sessions are a teacher free environment which allows students to be more open about concerns and problems they may be facing while taking the course.

Tutoring vs. SI:

SI may sound similar to tutoring, but the two should not be confused. Tutoring is direct help for a specific problem and nothing else. SI focuses on the entire course, and is tailored to help students in all areas concerning their class. To be clear, SI will not do your homework/labs for you. Instead, SI will cover all topics and concepts so you will have the knowledge to do your assignments with ease.

SI for your class:

Your SI this semester has been structured to cover a wide range of topics. The three points of emphasis are:

- The basics
- Concepts covered in class
- Problems you may encounter in the future

This semester, your SI has been structured in RPG format. The game rules/quests can be found at www.github.com/dlouie5/CPSC121-SI. This game format is run through your SI leader, who will be holding sessions Mondays and Wednesdays from 4-5:15 in the ULC. If you have any questions regarding SI, feel free to talk to your SI leader before/after class or at the SI sessions.
